## Vestibular-optokinetic System

Ileok Jung, MD

Department of Neurology, Korea University Ansan Hospital, Ansan, Korea

---

This session briefly deals with the ocular motor systems that hold images steady on the retina during movement of the head. To hold vision steady, labyrinthine, visual cues and somatosensory information are used. We will review (1) the function of the vestibular-optokinetic system during activities, (2) anatomy and physiology of the peripheral vestibular system, and (3) quantitative aspects of the vestibular-optokinetic system.
